Dear Mark

Re: PTL Code Modification Proposals 19, 20 and 21

Thank you for your recent submission of the Final Modification Reports in respect of the above named modifications. The Northern Ireland Authority for Utility Regulation (NIAUR) has considered the issues raised by these modifications and the FMR. The Authority has concluded that the modification would better facilitate the "relevant objective" as defined in your gas conveyance licence - condition 2.4.1.

Reasons for the Authority’s decision

PTL Code Modification Proposal 19 - Implementation of Daily Capacity

PTL Code Modification Proposal 20 - Implementation of Charging and Credit Procedures Changes to achieve IME2 Compliance

PTL Code Modification Proposal 21 - Implementation of Virtual Reverse Flow to achieve IME2 Compliance

We note that no responses were received to any of the consultations which PTL conducted.

PTL has concluded in its FMRs that on introduction of a daily capacity product Shippers will be able to avail of short term capacity and so would enhance the efficient operation of the network. Introduction of reverse flow services will also enhance the efficient operation of the network. Modifications are also required to update the payment and credit procedures in the Network Code to ensure the new services are charge for accordingly and appropriate credit procedure obligations are put in place.
Also on offering a daily capacity product in Northern Ireland, the UK would address the infringement of Gas Regulation (EC) No 1775/2005 with respect to availability of daily capacity and virtual reverse flow services. The Authority agrees with PTL’s conclusions.

Conclusion

Accordingly, and as required by Section 9 of your Transportation Code Modification Rules, NIAUR directs PTL to implement the proposed modifications 19, 20 and 21 with effect from 1\textsuperscript{st} July 2012.

Yours sincerely

Shane Lynch
For and on behalf of NIAUR
