

# Summary of Consultation Responses

## OS Scheme and CMP Methodology Statement

Version 1.0

11<sup>th</sup> August 2016

Matter/Subject	Respondent	Comments	TSOs Response
General	SSE	SSE is in favour of the merger of the TSO documents as the procedures in place are identical.	The TSOs welcome this support.
CMP Mechanisms Activation	SSE	SSE sought clarity as to whether the IT Systems referenced in section 4.4.3 are in place.	Given the level of capacity bookings and forecast demand the TSOs do not anticipate that in the near future there will be any contractual congestion therefore do not believe that there is sufficient justification to make the IT investment at this time.
Notification and Publication of the Amount of Allocable IP Entry Capacity	SSE	When Oversubscription Capacity is being made available the relevant TSO will publish a general notification to Shippers on its website. SSE urges the TSOs to ensure that this information will be accessible and easy to find.	If the situation arises whereby Oversubscription Capacity is available, the relevant TSO will ensure the notification is easily accessible on its website.
Buyback Process	SSE	Section 6.1.2. notes that when a TSO intends to commence offering Oversubscription Capacity, it shall also notify Shippers whether the buyback process will be conducted using PRISMA or using the TSOs own IT Systems. The TSO may update this information from time to time by notifying Shippers in writing. SSE sought clarity on the timing of this notification and whether it will be 6 months in advance in accordance with section 4.4.3.	The notice period will be dependent on the IT solution chosen to deliver the buyback process and the TSOs will seek to bring the IT solution into operation as quickly as practically possible. In this context, the TSOs will endeavour to provide as much notice as possible as to the choice of system and intended start date. Hence the 6 months notice is a maximum period but it may be shorter if IT delivery timescales permit.
	SSE	Section 6.4.2. notes that where a TSO determines there is a requirement to purchase IP Entry Capacity, the relevant TSO shall issue a Buyback Invitation to Shippers at the IP in accordance with its Network Code. SSE assumes that this will be done in accordance with the section 1A.17 of the relevant Network Codes.	Section 1A.17 of the PTL and GNI(UK) Network Codes is concerned with the Surrender of IP Entry Capacity. The Buyback Invitation referenced in section 6.4.2 will be issued in accordance with section 1A.19 of the relevant TSO's Network Code.
